

Flinders University Institutional Biosafety Committee (IBC) PC2 Microbiological Laboratory Induction Checklist

This checklist must be completed by all new personnel working within a PC2 Microbiological Laboratory (as per AS/NZS 2243.3) before commencing any work within the facility.

Name:		Trainer:				
Facility room # & PC Level: Date:						
Task / Information			Completed			
			Yes	No	N/A	
Backg	round Information Have read the Flinders University Biosafety Manual.					
	• •	•.				
2.	2. Have been shown the Flinders University Biosafety Website.					
3.	Have been provided with relevant information concerning associated risks relevant to the facility.	approved projects &				
Behavioural Requirements						
4.	4. When undertaking work in the facility not involving risk group 2 microorganisms, care is taken to not cross-contaminate. Decontamination and workflow procedures are documented and followed to ensure this.					
5.	5. Except during entry or exit of personnel, doors of the facility are kept closed when work is in progress.					
6.	Windows are kept closed and locked at all times.					
7.	Closed lab gown worn by all personnel working inside the facility.					
8.	. Lab gowns are removed and hands washed before personnel leave the facility.					
9.	 Disposable gloves are worn whenever handling risk group 2 microorganisms or biologically hazardous samples. 					
10	10. Other PPE (e.g. protective eyewear or face mask) worn as required.					
11	Work surfaces and equipment used in direct contact with a are decontaminated at completion of work.	risk group 2 microorganisms				
12	Equipment is decontaminated before being removed from serviced by maintenance personnel.	facility, and/or before being				
13	Contaminated lab gowns are taken off as soon as practical appropriate disinfectants prior to laundering, reuse or disp of GMOs may be washed by normal laundry methods.					
14	Pest inspections and pest management routinely conducted	d in the facility.				
15	Decontamination agents used in facility for different types periods and maintenance (where applicable).	s of work, & relevant expiry				
16	Eyewash testing (where applicable).					
17	Avoid/minimise creation of aerosols.					
Biosafety Cabinets						
18	All work that may produce aerosols containing risk group conducted in a Class II biosafety cabinet.	2 microorganisms must be				
19	Trained in how to operate and decontaminate biosafety ca	binet.				

Transport (refer to relevant transport SOPs available on biosafety website)							
20. Risk group 2 microorganisms are double contained in sealed, unbreakable containers at all times during transport.							
21. Primary and secondary container is decontaminated before being taken out of facility.							
22. Transport container(s) labelled with emergency contact details, sample details and biohazard symbol.							
23. Samples are not left unattended during transport.							
Storage (refer to storage SOP available on biosafety website)							
24. Storage locations outside of the certified facility must be locked.							
25. Records of all risk group 2 microorganisms stored in the facility are maintained. IBC approval number is recorded in storage records.							
26. All stored items are labelled with emergency contact details, sample details and biohazard symbol.							
27. Risk group 2 microorganisms are double contained in sealed, unbreakable containers during storage. A fridge/freezer/cupboard/incubator can act as the secondary container.							
28. Primary container is decontaminated before being placed in storage.							
Disposal (refer to disposal SOP available on biosafety website)							
29. Segregation of different types of waste created within the facility – general waste, biohazard waste, other relevant types							
30. Disinfection / autoclaving / incineration procedure(s) for biohazard waste in the facility (refer to IBC approval notice(s), IBC Disposal SOP (as per biosafety website) and Appendix F of Australian Standard 2243.3).							
31. Biohazard waste disposed of via the biohazard (yellow) waste stream is double contained (double-bagged & carried in a tub, bucket or enclosed trolley) when taken to autoclave or mobile yellow bin.							
Emergency / Unintentional Release / Spill Procedures							
32. Shown location of emergency exits, fire extinguishers, eye wash & safety shower							
33. Have been shown & have read biohazard spill / unintentional release flowchart & spill clean-up instructions.							
34. Personal contamination / exposure procedures outlined & aware of reporting requirements on FlinSafe.							
Unique Facility Requirements	I						

I acknowledge that I have received training in, and understand the above listed requirements, and agree to comply with these requirements when working within the specified facility / facilities):
